# GEAR

## NEW AND NOTEWORTHY GEAR THAT YOU SIMPLY CAN'T MISS

### CMMG 9 AR CONVERSION MAGAZINES

→ Now you can run a 9mm CMMG upper receiver that uses the company's radial-delayed blowback operating system with a standard AR-15 lower—not one specially designed for 9mm stick magazines. You simply slide the adapter inside a Magpul Gen M2 or M3 PMAG body designed for 5.56mm NATO rounds. The adapter comes set up for 10 rounds, but you can easily modify it to hold 15, 20 or 30 rounds of 9mm ammunition. (cmmginc.com)

### CONTINUOUS PRECISION CZ EDT

→ The Continuous Precision Enhanced Duty Trigger (EDT) for CZ P-10 C and F pistols features a 25-percent reduction in pretravel, overtravel and weight. Crafted from 6061-T6 aluminum with a flat serrated face, these new triggers are true drop-in upgrades. Continuous Precision is working on a Precision version of the trigger as well, which will feature a 40-percent reduction in weight pretravel and overtravel. While the first 100 EDTs were gold, future triggers will only be available in black. (cpcustomguns.com)

### ETS MAGAZINES

→ Everyone's a fan of clear magazines. They look cool and help you see how many rounds are left. On the handgun side, Glock fans have been able to enjoy translucent Elite Tactical Systems (ETS) magazines for a while. But now ETS is rolling out new models for Sig Sauer P320 and Smith & Wesson M&P series pistols. Various capacities are available, including 15-, 17-, 22- and 30-round mags for the P320. (etsgroup.us)

### CZ SCORPION EVO 3 S1 CARBINE MAGPUL EDITION

→ With Magpul unveiling several different accessories for the CZ Scorpion EVO 3 series earlier this year, it only makes sense for CZ-USA to offer a carbine version with all of the add-ons already included. The Magpul Edition carbine comes with 35-round magazines, an MOE-EVO grip, a Zhukov-S folding stock, an MOE-EVO magazine release and MBUS sights. The forend has M-LOK slots for accessories, and shooters can choose between a muzzle brake or faux suppressor for the barrel. (cz-usa.com)

### GUN PRO ANTI-JAM MAGAZINES

→ Gun Pro has added two new models to its Anti-Jam Magazine line, including seven- and 10-round 9mm models for 1911s. These magazines are made here in the U.S. with the highest-quality materials and craftsmanship. The new

Nose-Dive Control Spring increases reliability in all single-stack 1911 pistols using standard round-nose or hollow-point bullets. The polished and fitted body, spring and follower also work to provide smooth feeding. (gunpro.us)

### MICROTECH DIRAC

→ The all-new Dirac is Microtech's first double-action knife with a cover-firing sliding blade. The ergonomic chassis has curved lines similar to the HALO's for a slightly different feel compared to the company's other handles. Microtech researched this particular out-the-front (OTF) design and applied its signature ultra-high-tolerance features, such as proprietary hardware, an innovative internal mechanism and a glass breaker. With an overall length of 7.25 inches, the Dirac is just right for an EDC knife. (microtechknives.com)

### NIGHT FISION PERFECT DOT TRITIUM NIGHT SIGHTS

→ When it comes to tritium gun sights, aluminum sleeves and painted-on white rings are the norm. But Night Fision breaks the mold. Its patent-pending, injection-molded sleeve design not only holds the tritium vials securely in place but creates a brighter and more durable ring. Night Fision calls it the Perfect Dot, and it provides maximum visibility both day and night. These sights come in multiple colors, including white, orange, yellow, red and blue, and in many different configurations for pistols from Canik, Glock, Smith & Wesson, Sig Sauer and Springfield Armory. (nightfision.com)

### GERMAN PRECISION OPTICS RANGEGUIDE

→ The 10x50mm RangeGuide combines spectacular optical quality and modern electronic range-finding technology in a compact set of binoculars. The 50mm objective lenses, coupled with "GPObright" high-transmission lens coatings, provide an exceptionally bright view in low light, while the magnesium body and armor coatings make it tough enough to use in any outdoor environment. And it's capable of ranging out to more than 3,000 yards. If you need to see your game and know the distance in every hunting environment, the RangeGuide is your winning ticket. (gpo-usa.com)

### HOLOSUN HS507C

→ The new HS507C from Holosun is a pistol-sized reflex sight with an open frame for a great sight picture, clear glass and a rugged 7075-T6 aluminum housing. It is powered by a CR2032 battery but can also use solar power as a backup.

Users can also switch the reticle from a 32-MOA circle around a 2-MOA dot to just the ring or just the dot, all at the push of a button. Better yet, the same LED projects all three reticles, so no re-zeroing is necessary. (holosun.com)

### MAXIM DEFENSE SCW

→ The new SCW stock from Maxim Defense is extremely compact yet durable and comfortable. There aren't any buttons to push. You just pull the stock back to deploy it, with five length-of-pull positions available. At its most collapsed position, the SCW adds 4 inches to your AR-15's overall length. Fully extended, it adds 8.75 inches. Made from hardcoat anodized 7075-T6 aluminum, the SCW is designed to fit mil-spec AR-15 lower receiver extensions. (maximdefense.com)
